Project Overview

The AI-Powered Customer Support & Service Automation system streamlines customer support by automating case management using Salesforce Service Cloud, Flows, and Agentforce AI. It efficiently handles customer inquiries related to product issues, order tracking, warranty claims, and general support. The solution improves response time, ensures consistent service quality, and automates case routing, approvals, and resolutions. It also provides real-time insights through dashboards and reports, enabling better support performance and customer satisfaction.

Features

- Case Management
- AI-Powered Issue Analysis
- Automatic Ticket Creation
- Smart Ticket Categorization
- Automatic Priority Assignment
- Email Alerts
- Reports and Dashboard Visualization
- Real-Time Ticket Tracking
- Workflow Automation

Technology Stack

Salesforce CRM, Salesforce Lightning Platform, Agentforce AI, Agentforce Builder, Salesforce Flow Builder, Case Management, Record-Triggered Flows, Email Alerts, Reports, Dashboards, and Salesforce Lightning Experience.

Implementation

The project was implemented using Salesforce CRM, Agentforce AI with a Support Ticket custom object, Salesforce Flows, Case Management, Email Alerts, Reports, and Dashboards. It automates customer support by analyzing issues, creating support tickets, assigning priorities, and providing real-time monitoring.

1. Salesforce Setup Home

Description: The Salesforce Setup Home Page serves as the central administration console for the project, providing access to platform configuration and management tools. It displays recently accessed components such as users, permission sets, page layouts, email alerts, and custom object settings, enabling efficient administration of the AI-Powered Customer Support Ticketing System.

Description: This screen displays the custom fields and relationships created for the Support Ticket object, enabling efficient storage and management of customer support ticket information.

4. Agentforce AI

Description: The Agentforce AI Support Ticket Agent analyzes customer queries using natural language processing and automatically identifies the issue category, priority, and summary. It then invokes a Salesforce Flow to create a support ticket, enabling faster and more efficient customer support.

5. Autolaunched Flow – Support Ticket AI Case

The screenshot displays the Salesforce Flow Builder interface for an Autolaunched Flow named "Support Ticket AI Case Creator - V3". The flow is composed of three steps: "Autolaunched Flow Start", "Create Support Case (Create Records)", and "End". The "Create Support Case" step is currently selected, and its configuration panel is open on the right side of the screen.

The configuration panel for the "Create Support Case" step shows the following field mappings:

Field	Value
Description	varDescription
Case Origin	Web
Priority	varPriority
Status	New
Subject	varSubject

The "Manually assign variables (advanced)" checkbox is checked. The flow is saved and active, with a status bar indicating it was last saved on 6/30/2026 at 05:08 PM.

Description: This autolaunched flow automatically creates a Salesforce Case by assigning values such as subject, description, priority, and status. It reduces manual effort and ensures accurate ticket creation.

6. Record-Triggered Flow – Support Ticket Automation

Description: This record-triggered flow automatically checks the priority of newly created tickets. Based on the priority, it updates records and executes automated actions to improve support efficiency.

A B C D E F G H I J K L M N O P Q R S T U V W X Y Z Other All

Description: The Email Alerts feature is configured to automatically notify the support team whenever a high-priority support ticket is created. This ensures timely communication and enables faster response to critical customer issues.

8. Cases

The screenshot displays the Salesforce 'All Open Cases' page. The page header shows the URL: `orgfarm-104505bf22-dev-ed.develop.lightning.force.com/lightning/o/Case/list?filterName=AllOpenCases`. The page is titled 'All Open Cases' and shows 17 items. The table below lists the cases:

Case...	Contact Name	Subject	Status	Priority	Date/Time Opened	Case ...
11 00001034		Internet connection not working	New	High	6/30/2026, 11:35 PM	einstein
12 00001035		Login issue during password reset	New	High	6/30/2026, 11:37 PM	einstein
13 00001036		Internet is not working	New	High	6/30/2026, 11:46 PM	einstein
14 00001037	Test User	Internet is not working	New	Medium	7/1/2026, 12:03 AM	qvina
15 00001038		Login issue	New	High	7/1/2026, 12:08 AM	einstein
16 00001039		Payment issue	New	High	7/1/2026, 12:12 AM	einstein
17 00001040	vinay	Internet is not working	New	Medium	7/1/2026, 12:13 AM	qvina

Description: This screen displays all open customer support cases along with details such as subject, priority, status, and owner. It enables support agents to monitor and manage active cases efficiently.

Description: This screen displays the complete details of a Support Ticket, including its name, status, priority, description, owner, and AI Suggested Response. It enables support agents to view, update, and track customer support requests efficiently.

10. Reports

The screenshot shows the Salesforce Reports module interface. At the top, there's a navigation bar with 'Developer Edition' and a search bar. Below this, the 'Reports' tab is selected in the main navigation. The left sidebar shows a list of report categories: 'Recent' (3 items), 'Created by Me', 'Private Reports', 'Public Reports', 'All Reports', 'FOLDERS', 'All Folders', 'Created by Me', 'Shared with Me', and 'FAVORITES'. The main content area displays a table of recent reports.

Report Name	Description	Folder	Created By	Created On	Subscribed
Open Tickets Report		Private Reports	Shaik Shaguftha Ahmed	6/29/2026, 3:04 AM	
Closed Tickets Report		Private Reports	Shaik Shaguftha Ahmed	6/29/2026, 3:10 AM	
High Priority Tickets Report		Private Reports	Shaik Shaguftha Ahmed	6/29/2026, 3:01 AM	

Description: The Reports module provides detailed reports on open, closed, and high-priority support tickets. These reports help analyze ticket trends and evaluate customer support performance.

11. Dashboard

Description: The Dashboard provides graphical insights into support ticket statistics, including open, closed, and high-priority tickets. It helps monitor overall support performance and track key metrics in real time.

Conclusion

The AI-Powered Customer Support Ticketing System successfully automates the customer support process by integrating Salesforce CRM with Agentforce AI. It efficiently analyzes customer issues, creates and prioritizes support tickets, automates workflows, and provides real-time reports and dashboards for better decision-making. This project reduces manual effort, improves response time, and enhances the overall efficiency and quality of customer support services.
